**STOP THE GUESSWORK**

The Only Universal Coupling for DWV Applications

ONE coupling per nominal diameter joins most DWV pipe materials:

- Steel
- ABS/PVC Plastic (SCH 40)
- Cast Iron
- Extra Heavy Cast Iron
- Ductile Iron
- Stainless Steel
- Duriron®
- Thinwall Plastic (SDR 35)
- Clay
- Asbestos Cement (Transite)

For non-pressure, gravity flow sewer applications only.

Multiple double sealing profile on each side.

A bedding channel on both sides of the tension bands ensures reliable and secure band guidance.

The design of the tension bands ensure the force application during the diameter adaptation is spread evenly onto the pipe over the entire circumference.

Nominal I.D.'s match-up perfectly, whether same or different pipe materials.

Deflection is possible on each side, up to 3°.

Stepless adjustment on both sides, with permanent securing against significant shear loads and deflection.

Securing cage and gasket retain a neutral position during the diameter adjustment process, which means that puckering or deformation of the rubber can be reliably avoided.

Stainless steel tension bands ensure reliable, rapid and uniform assembly.

Robust design ensures the coupling won't fall apart on the job site.

Low inventory storage costs as only a few sizes are needed to meet all applications.

Increased efficiency equals labor cost savings.

Greatly exceeds hydrostatic testing requirements of ASTM C1173.

No more trips to a job site with the wrong coupling.

The reduction process takes place centrically, uniformly and separately on each side of the pipe coupling.

Corrosion resistant AISI 304 series stainless steel components.

No bushings are required to bridge even substantial diameter differences within the same nominal diameter.

Injection molded EPDM rubber gasket.

High impact polyamide (nylon) securing cage.

Greatly exceeds hydrostatic testing requirements of ASTM C1173.
